PROFESSIONAL SUMMARY

QA Engineer / SDET with 5+ years of experience in software quality assurance across manual testing and test automation for web, mobile, and API platforms. Strong experience designing and maintaining end-to-end automation frameworks using JavaScript, TypeScript, and Python, with hands-on experience in Playwright, Cypress, Selenium, Appium, and PyTest. Experienced in integrating automated tests into CI/CD pipelines and performing API, integration, functional, regression, and cross-platform testing across web, iOS, and Android. Proven track record of improving automated regression coverage, reducing test execution cycles, increasing test reliability, and investigating failures through root-cause analysis. Currently working on mobile automation for global applications at AB InBev and collaborating with distributed, English-speaking engineering teams. ISTQB CTFL certified with professional working proficiency in English.

CORE TECHNICAL SKILLS

Test Automation: Appium, Playwright, Selenium, Cypress, Python, PyTest, TypeScript, JavaScript, Page Object Model (POM), BDD, framework design

API Testing: Postman, REST, JSON Schema validation, contract testing

Performance: JMeter, load testing, response-time analysis, Core Web Vitals

Mobile & Cross-Platform: iOS, Android, real-device and cloud device farms (LambdaTest), multi-market app configurations, responsive web testing

Databases & DevOps: MySQL, SQL, DBeaver, MySQL Workbench, Git, GitHub, GitLab, Azure DevOps, Docker, CI/CD pipelines

AI-Assisted QA: designed and built custom AI agents and skills to accelerate test generation, failure analysis, test maintenance, and QA workflow automation

LLM & AI Testing: prompt regression, output validation, hallucination testing, and behavioral testing of AI-powered features

Methodologies: Scrum, Kanban, Risk-based Testing, Continuous Testing, Shift-Left Quality

PROFESSIONAL EXPERIENCE

Mobile QA Automation Engineer

Jun 2026 – Present

AB InBev — Global Beverage Company, Belgium

- Design, build, and maintain mobile automated tests with Appium, Python, and PyTest, covering end-to-end user journeys across multiple markets and application configurations for AB InBev's global apps.
- Own Smoke, Regression, and E2E suites executed on real devices and cloud-based device farms (LambdaTest), integrated into CI/CD pipelines for continuous feedback on every build.
- Continuously improve the automation framework for stability, maintainability, and execution efficiency, reducing flaky tests through better synchronization, test data handling, and reusable screen objects.
- Investigate and triage automation failures end to end, separating real product defects from flaky tests, test data gaps, and environment issues, and reporting actionable bugs to development teams.
- Extend coverage to web automation with Selenium, keeping a single, consistent quality strategy across mobile and web.
- Collaborate with global, cross-functional engineering teams across time zones in an English-speaking international environment.

QA Automation Engineer / SDET

Sep 2021 – May 2026

Conexa Saúde — Healthtech (Telemedicine Platform), Brazil

- Designed and maintained a scalable end-to-end automation framework using Playwright + TypeScript and Cypress + JavaScript with Page Object Model architecture, reducing test maintenance time by ~40%.
- Increased automated regression coverage of critical user journeys from ~30% to ~80%, cutting full regression cycle time from days to hours and catching an estimated 70%+ of critical defects pre-production in healthcare-grade releases.
- Built reusable API test suites in Postman and Playwright, validating REST contracts and integrating tests into CI pipelines for early defect detection.
- Designed and built custom AI agents and skills to accelerate automated test creation, analyze failures and logs, assist with debugging and test maintenance, and automate repetitive QA workflows, reducing manual scripting effort by 50%+.
- Tested LLM-powered features through prompt regression, output validation, and hallucination testing, applying behavioral testing techniques to non-deterministic AI functionality.
- Led test strategy and risk-based planning for new features and executed cross-platform testing across web, iOS, and Android, partnering with developers, product managers, and designers from refinement through production validation.
- Mentored team members on automation best practices, BDD modeling, and quality engineering principles.

QA Analyst

Feb 2021 – Sep 2021

D&D Tech Solutions — Client: Solar Coca-Cola, Brazil

- Owned QA delivery across multiple parallel squads for Solar Coca-Cola, leading full SDLC quality activities from requirements review and test planning through regression and production validation.
- Designed structured test scenarios, test cases, and traceability documentation aligned with acceptance criteria and business rules.
- Identified and tracked defects through Azure DevOps, collaborating with developers to drive resolution and root-cause analysis.
- Mentored junior QA analysts and presented feature demos and test results to stakeholders and client leadership.

CERTIFICATIONS & LEARNING

- ISTQB Certified Tester, Foundation Level (CTFL)
- Playwright Test Automation — QAzando
- Cypress Test Automation — QA Academy
- Performance & Load Testing with JMeter — Udemy
- JavaScript for Testers — QAzando
- Full Stack Developer Program — Instituto Master
- Front-end Development — in progress (private mentorship)

EDUCATION & LANGUAGES

B.Sc. Analysis & Systems Development

Universidade Cidade de São Paulo · Completed

Portuguese: Native

English: Professional Working Proficiency
